Quality-Compare Prices

THE old Olympic Game promoters were great for what we call "form." Symmetry, proportion, soundness and proper balance out-bid bulging muscles for favor—yes, and out-won, too, just as they will today.

More bulk never was synonymous with endurance—and the truth of this statement drives home with a bang, when you apply it to tires.

If thick, heavy tires were the last word in tire construction, we could wipe out of existence a Goodrich Research and Test Department employing seventy people. We would take off the road a battalion of ten automobiles, that run twenty-four hours a day and every day in the year, grinding tires of all makes to pieces, just for the sake of information to us and eventual economy to the user of Goodrich Tires.

There is where we learn to cut out of a tire the material which gets the user nothing.

Of course, when we stripped tire price lists of their padding—fictitious values—we expected rivals to say we had stripped our tires.

Note the following table of comparative prices on non-skid tires. Columns headed "A," "B," "C" and "D" represent four highly-advertised tires:
